

Holding Company Frontend Masterplan v3

Date: 2026-06-15 Scope: Frontend only (design system, page architecture, interaction model, and implementation blueprint) Reference model: First Pacific structural discipline and corporate communication style

| 1. Frontend Vision

Build a premium, restrained, institutional website that feels boardroom-ready while still modern and highly usable.

Design principles:

- Parent brand first, business sectors second.
- Sector-led architecture over service clutter.
- Clarity over decoration.
- Data-backed credibility over marketing claims.
- Scalable layout system for future subsidiaries and countries.

Core positioning line:

Building long-term value across essential and growth industries.

| 2. What We Are Replicating from the Reference Site

The objective is to mirror the logic and discipline, not clone branding.

Key patterns to carry over:

- Corporate-first navigation and information hierarchy.
- Deep page tree that supports governance, updates, and archive content.
- Dedicated historical timeline section similar to Key Corporate Events.
- Content blocks that feel investor-grade and durable over time.
- Footer and utility links that reinforce trust and compliance.

What to avoid:

- Startup hero language.
 - Heavy motion and visual noise.
 - Consumer e-commerce patterns.
 - Generic template sections that look interchangeable.
-

3. Frontend Information Architecture

Top-level nav:

- Home
- About Us
- Our Sectors
- Leadership and Governance
- Markets
- News and Insights
- Contact

Utility and legal nav:

- Privacy Policy
- Terms of Use
- Cookies Policy
- Corporate Information

4. Homepage Composition Blueprint

Homepage sections in exact order:

1. Hero: Parent identity, positioning statement, two primary CTAs.
2. Group introduction: concise paragraph of holdco model and operating intent.
3. Sector overview grid: five core sectors plus optional Emerging Ventures placeholder.
4. Portfolio logic: three strategic grouping bands to show coherence.
5. Markets footprint: Australia base with regional growth outlook.
6. News and insights preview: latest three items.
7. Key Corporate Events teaser: link to full events timeline page.
8. Final CTA strip: partnership and strategic enquiry routing.

Homepage interaction rules:

- Sticky header after first scroll threshold.
- Sector cards elevate on hover with subtle shadow and line accent.
- News cards maintain fixed height for visual balance.

- CTA bar remains minimal and contrast-driven.

5. Key Corporate Events Frontend System

This is the most important reference pattern requested.

5.1 Purpose

Provide an institutional timeline of company milestones to build credibility, context, and historical depth.

5.2 Layout Model

Desktop layout:

- Left rail: year anchors and jump navigation.
- Center column: timeline spine with event markers.
- Right column: event cards or expandable details.

Tablet and mobile layout:

- Single-column timeline stack.
- Sticky year filter at top.
- Expand and collapse cards for readability.

5.3 Event Card Structure

Each event card should include:

- Year or date.
- Event headline.
- One to three sentence summary.
- Optional tags: sector, market, transaction type.
- Read more action if detailed page exists.

5.4 Filtering and Utility

Filters:

- Year range
- Sector
- Region

Actions:

- Reset filter
- Copy shareable URL with filter state
- Download printable timeline PDF later phase

5.5 Animation and Motion

- Timeline markers animate in with subtle fade and vertical reveal.
 - No parallax and no heavy scroll effects.
 - Motion duration stays in the 180ms to 280ms range.
-

| 6. Page-by-Page Frontend Wireframe Specs

6.1 About Us

Sections:

- Hero statement
- Corporate profile narrative
- Group structure visual
- Mission, vision, and principles
- Link blocks to leadership and governance pages

6.2 Our Sectors Overview

Sections:

- Sector framework introduction
- Sector cards grid
- Strategic grouping block
- Cross-sector collaboration note

6.3 Sector Detail Template (repeatable for all sectors)

Sections:

- Hero + positioning line
- Overview
- What We Do
- Core capabilities list
- Why It Matters
- Sector-specific enquiry CTA

6.4 Leadership and Governance

Sections:

- Governance philosophy

- Leadership profiles grid
- Oversight and accountability model
- Compliance and policy links

6.5 Markets

Sections:

- Current operating base
- Priority regions and growth thesis
- Region cards with status badges

6.6 News and Insights

Sections:

- Featured story
- Latest posts grid
- Category filters
- Archive pagination

6.7 Contact

Sections:

- Contact details and office information
- Routed enquiry form
- Consent and privacy note
- Expected response time block

| 7. Component Library (Frontend)

Core components:

- GlobalHeader
- MegaNav
- HeroCorporate
- SectorCard
- PortfolioLogicBand
- MarketsFootprintPanel
- InsightsCard
- TimelineEvents
- LeadershipCard
- ContactRoutingForm
- LegalFooter
- CookieConsentBar

Component standards:

- All components accept theme tokens only.
- No hard-coded spacing or colors.
- Accessible labels and focus states mandatory.
- Empty states and error states required for cards and lists.

8. Frontend Data Contracts and Schema

Frontend-facing content types:

- Page
- Sector
- Event
- Insight
- LeadershipProfile

- Market
- ContactRoutingRule

Key frontend requirements:

- Slug-driven dynamic routing.
 - Type-safe content mapping for render modules.
 - Graceful fallback for missing optional fields.
-

| 9. Design Tokens and Visual System

Token categories:

- Color palette: corporate navy, slate, mist, neutral, one restrained accent.
- Typography: high-legibility serif and sans pairing for corporate authority.
- Spacing scale: 4, 8, 12, 16, 24, 32, 48, 64.
- Radius scale: 0, 4, 8, 12.
- Shadow scale: subtle only.

Visual behavior:

- Section rhythm driven by whitespace.
 - Strong heading hierarchy using clear weight contrast.
 - Borders and dividers used to frame institutional content.
-

| 10. Responsive Strategy

Breakpoints:

- Mobile: 360 to 767
- Tablet: 768 to 1199
- Desktop: 1200+

Responsive rules:

- Navigation collapses into a structured drawer with grouped categories.
 - Timeline converts from multi-column to single-column stack.
 - Cards maintain equalized heights only on desktop.
 - Tap targets minimum 44 by 44.
-

| 11. Accessibility and UX Quality

Frontend acceptance:

- WCAG AA color contrast.
- Keyboard access across nav, filters, and timeline interactions.
- Visible focus indicators.

- Semantic heading levels and landmarks.
 - Reduced motion support for all animated components.
-

| 12. SEO Frontend Requirements

Technical requirements:

- Single H1 per page.
- Clean slug routing.
- Canonical tags.
- Open Graph and Twitter metadata.
- Schema markup for Organization, BreadcrumbList, and Article.
- XML sitemap and robots controls.

Content-rendering requirements:

- Proper alt text handling.
 - Preview cards that include structured metadata.
 - Fast loading media and lazy rendering below fold.
-

| 13. Frontend Delivery Flow

Discovery and Content
Inputs

```

```

IA and Wireframes

UI Kit and Component
System

Astro Frontend Build

Sprint model:

- Sprint 1: IA and wireframes
- Sprint 2: visual system and component scaffolding
- Sprint 3: page implementation
- Sprint 4: events timeline and news templates
- Sprint 5: responsive polish and accessibility hardening

- Sprint 6: final QA and production readiness

| 14. What Will Be Delivered in Frontend Phase

Deliverables:

- Full responsive frontend for all phase-1 pages.
- Production-ready component library.
- Key Corporate Events timeline frontend module.
- Navigation system with desktop and mobile behaviors.
- Styled news and insights listing and detail templates.
- Contact form frontend with validation states and routing fields.
- SEO metadata integration hooks.

- Accessibility-ready interaction patterns.

Not included in this phase:

- Backend business logic implementation.
 - Final CMS provisioning and editorial workflows.
 - CRM deep integration.
 - Multilingual implementation.
-

| 15. Final Frontend Recommendation

Proceed with a corporate design language that matches the structural seriousness of First Pacific while introducing a cleaner, more modern interaction layer.

The highest-impact element should be the Key Corporate Events timeline system, implemented as a reusable, filterable, and future-proof frontend module.
