

Website Build Brief

[Holding Company Name]

Developer-ready specification based on the sector-led, disciplined corporate model of First Pacific Company Limited

Project type	Corporate website for a multi-sector holding company
Baseline model	First Pacific Company Limited (structure, tone, and sector-led presentation)
Primary objective	Build a scalable, premium corporate website that can support multiple business divisions and future expansion

Note: This brief uses First Pacific as a strategic and presentation benchmark only. All copy, structure, and implementation details below are original and tailored to this project.

1. Executive Summary

We are building a professional website for a diversified holding company with an initial base in Australia and planned multi-country growth. The group will operate across ICT Solutions, Property Management, Health, Wellness & Beauty, AgriFood & Nutrition, Training & Development, and selected emerging ventures.

The site should feel like a serious listed-style holding company website: clean, sector-led, credible, and scalable. The closest baseline model is First Pacific Company Limited. The goal is not to copy First Pacific visually word-for-word, but to borrow the same disciplined logic:

- a strong parent-company identity,
- clearly defined sectors,
- restrained and credible tone,
- easy navigation between corporate pages and business divisions,
- a structure that can scale as new businesses, countries, or subsidiaries are added.

The site must be ready to support business development, partnerships, investor-grade conversations, recruitment of senior talent, and future public-facing credibility across sectors.

2. Baseline Model: What to Borrow from First Pacific

Use First Pacific as the reference point for structure and corporate tone. The website should reflect the same broad qualities:

- sector-based navigation instead of a cluttered services list,
- parent-company positioning first, with business divisions underneath,
- concise corporate language with no exaggerated claims,
- a clean, stable, mature visual system that suggests stewardship and long-term value,
- an architecture that can accommodate multiple investments, operating entities, and regions.

What to carry into this project:

- disciplined homepage messaging,
- clear “About / Sectors / Governance / Contact” structure,
- emphasis on long-term value creation and group oversight,
- straightforward presentation of business sectors,
- restrained use of colour, motion, and visuals.

What not to do:

- do not build a startup-style landing page,
- do not overload the homepage with too many claims or animations,
- do not present all sectors as unrelated businesses,
- do not use casual, salesy, or overly promotional language.

3. Group Structure to Represent on the Website

The parent company should sit above the following sector divisions.

A. ICT Solutions

Sub-areas:

- Artificial Intelligence
- Cybersecurity
- Managed Services
- Digital Transformation
- Digital Media & Creative Technologies

B. Property Management

C. Health, Wellness & Beauty

Sub-areas:

- Healthcare services
- Digital health
- Wellness solutions
- Next-generation cosmetics
- Beauty and personal care
- Advanced formulations and innovation

D. AgriFood & Nutrition

Sub-areas:

- Agriculture
- Food systems
- Food science
- Nutrition consulting
- Product development
- Sustainability and advisory

E. Training & Development

Sub-areas:

- Professional training
- Executive education
- Technical learning
- Workforce capability
- Cyber / AI education
- Industry-aligned development

F. Emerging Ventures

Optional in phase 1. Could later include:

- multimedia,
- film / productions,
- creative ventures,
- new incubation projects.

Important presentation rule:

Digital media should remain under ICT Solutions in phase 1 unless media becomes a major standalone business line later.

4. Strategic Positioning

The website must position the company as a multi-sector holding group that builds and operates businesses in essential and growth industries.

Suggested parent positioning:

“Building long-term value across essential and growth industries.”

The group should be framed around three portfolio logics:

- Technology & Capability — ICT Solutions + Training & Development
- Essential Services — Property Management + Health, Wellness & Beauty
- Food, Science & Sustainability — AgriFood & Nutrition

This creates strategic coherence and prevents the group from feeling random or fragmented.

5. Primary Website Objectives

The website should:

1. establish trust and legitimacy for the holding company;
2. explain the group structure clearly;
3. present each sector in a premium, organized way;
4. support partnerships, corporate enquiries, and business development;
5. allow easy future expansion into new countries and business divisions;
6. provide an institutional-quality foundation for later investor, governance, and media content.

Secondary objectives:

- support search visibility,
- provide a content home for future insights / announcements,
- support leadership branding,
- route enquiries to the correct division.

6. Target Audiences

The site should be credible to several audiences at once:

- strategic partners,
- enterprise clients,
- healthcare and wellness collaborators,

- property stakeholders,
- agriculture / food / nutrition partners,
- training clients and institutions,
- investors and financial counterparties,
- government and regulatory stakeholders,
- future acquisition targets,
- senior-level hires.

This means the site must feel boardroom-ready rather than retail-oriented.

7. Design Direction

Overall look and feel:

- premium,
- modern,
- corporate,
- calm,
- international,
- future-facing,
- disciplined.

Visual direction:

- use a clean grid,
- large whitespace,
- strong typography,
- subtle motion only where useful,
- professional iconography,
- restrained imagery,
- corporate blue / slate / neutral tones with selective accent use,
- polished layout hierarchy similar to top-tier listed holding companies.

Avoid:

- template-heavy visuals,
- oversaturated colours,
- gimmicky motion,
- stock-photo overload,
- consumer e-commerce styling,
- startup clichés like “disrupting everything” language.

Suggested mood:

Think modern Asian listed holdco meets global professional services website.

8. Information Architecture / Sitemap

Main navigation:

- Home
- About Us
- Our Sectors
- Leadership & Governance
- Markets
- News / Insights
- Contact

Under “Our Sectors”:

- ICT Solutions
- Property Management
- Health, Wellness & Beauty
- AgriFood & Nutrition
- Training & Development
- Emerging Ventures (optional / future)

- Contact
- Privacy Policy
- Terms of Use
- Cookies Policy
- Corporate Information

9. Page-by-Page Build Requirements

Home

Purpose: establish the parent company, explain the group, show sector logic, and guide visitors into the right division.

About Us

Purpose: explain who the group is, how it works, its mission, vision, purpose, and operating principles.

Our Sectors

Purpose: provide a clean overview of all divisions and act as a gateway to sector pages.

ICT Solutions

Purpose: flagship division page. Should feel enterprise-grade and forward-looking.

Property Management

Purpose: show operational reliability, asset support, and disciplined service delivery.

Health, Wellness & Beauty

Purpose: show the combined healthcare / wellness / beauty platform in a careful, premium, innovation-led way.

AgriFood & Nutrition

Purpose: show the blend of agriculture, food systems, food science, nutrition, and consulting.

Training & Development

Purpose: show capability building, executive and technical training, and industry relevance.

Leadership & Governance

Purpose: show institutional discipline, leadership credibility, and oversight.

Markets

Purpose: show current base and regional / international outlook.

News / Insights

Purpose: support credibility, SEO, and future corporate communications.

Contact

Purpose: route enquiries by sector and provide a polished corporate contact experience.

10. Homepage Content Structure

Required homepage sections:

1. Hero section

Headline:

“Building Long-Term Value Across Essential and Growth Industries”

Subheadline:

“We are a diversified holding company focused on building, operating, and growing businesses across technology, property, health and wellness, agrifood, and workforce development.”

Primary calls to action:

- Explore Our Sectors
- Contact Us

2. Group introduction

Short paragraph describing the company as a disciplined, multi-sector holding group.

3. Sector overview grid

Each sector should appear as a card with:

- title,
- short summary,
- link to dedicated page.

4. Our approach

Brief section covering:

- long-term value creation,
- disciplined growth,
- governance,
- operational excellence,
- resilience and adaptability.

5. Portfolio logic

Show how the sectors fit under a coherent parent strategy.

6. Markets / footprint

Clean visual showing Australia as base plus Asia / international outlook.

7. News / insights preview

3 latest entries or placeholder cards for future publishing.

8. Final CTA

Invite partnership, enquiry, or strategic contact.

11. Sector Card Copy

Use these short summaries on the homepage and sectors overview page.

ICT Solutions

“AI, cybersecurity, managed services, and digital transformation for a connected world.”

Property Management

“Operational property services designed to support asset performance, consistency, and trust.”

Health, Wellness & Beauty

“Services and product innovation across healthcare, wellness, personal care, and beauty.”

AgriFood & Nutrition

“Agriculture, food science, nutrition, and consulting focused on resilience, innovation, and supply.”

Training & Development

“Professional capability, technical learning, executive development, and workforce readiness.”

Emerging Ventures

“Future-facing initiatives in media, creativity, innovation, and new business opportunities.”

12. Sample Sector Page Structure

Each sector page should follow a consistent structure:

- Hero title
- One-line positioning statement
- Overview paragraph
- “What We Do” section
- Core areas / capabilities
- Why it matters
- CTA / enquiry section

The page layout should be repeatable across sectors so new business divisions can be added without redesign.

Example: ICT Solutions core areas

- Artificial Intelligence
- Cybersecurity
- Managed Services
- Digital Transformation
- Digital Media & Creative Technologies

Example: AgriFood & Nutrition core areas

- Agriculture & Supply
- Food Science & Product Development
- Nutrition & Wellness Advisory
- AgriFood Consulting
- Sustainable Food Systems

13. Functional Requirements

The site must include:

- fully responsive design,
- CMS-backed content editing,
- modular page sections,
- sector-specific enquiry routing,
- SEO controls on every page,
- analytics integration,
- cookie banner,
- anti-spam protection on forms,
- image optimization,
- clean structured URLs,

- easy addition of new sectors or countries later,
- reusable content blocks,
- leadership profile management,
- news / insights publishing capability.

14. CMS / Content Management Requirements

Backend editing should allow the client to update:

- homepage sections,
- banners / hero text,
- sector pages,
- leadership profiles,
- market / region pages,
- news posts,
- contact details,
- footer links,
- legal pages,
- SEO titles and descriptions.

The editing experience should be simple and hard to break. Avoid a fragile layout that falls apart when text is edited.

15. SEO Requirements

Please build with strong SEO fundamentals from day one:

- clean URL structure,
- proper heading hierarchy,
- page-specific metadata,
- Open Graph data,
- alt text support,
- XML sitemap,
- robots / index controls,
- schema where useful,
- fast performance and good Core Web Vitals.

This is a corporate site, but it should still be search-friendly and ready for future content growth.

16. Performance, Security, and Technical Approach

Recommended characteristics:

- fast load speed,
- optimized images,
- minimal bloat,

- clean code base,
- secure admin environment,
- SSL,
- role-based CMS access,
- regular backups,
- plugin minimization if WordPress is used,
- scalable architecture for future growth.

Preferred build logic:

Use a modern stack or a well-implemented custom CMS / WordPress build with clean modular sections. The end result matters more than the stack: it must be fast, maintainable, secure, and easy to scale.

17. Contact / Lead Routing Requirements

Contact page and enquiry forms should include a dropdown for:

- General Corporate Enquiry
- ICT Solutions
- Property Management
- Health, Wellness & Beauty
- AgriFood & Nutrition
- Training & Development
- Partnerships / Investment
- Media / Other

Form submission should clearly route the enquiry to the appropriate business function or mailbox.

18. Phase-Based Delivery

Phase 1

- Home
- About Us
- Our Sectors
- Five core sector pages
- Leadership & Governance
- Markets
- Contact
- Legal pages

Phase 2

- News / Insights
- Emerging Ventures page
- Regional landing pages
- Downloadable PDF company profile

- Potential multilingual support
- Additional subsidiaries or country pages

19. Deliverables Expected from Developer

Please provide:

- design direction / mockups,
- final UI design system,
- responsive build,
- CMS implementation,
- contact form routing,
- legal pages,
- on-page SEO setup,
- performance optimization,
- analytics / cookie integration,
- launch-ready deployment package,
- clear instructions for updating content after launch.

20. Assets Needed from Client Side

Developer should request:

- final company name,
- logo and brand elements,
- colour palette preference,
- typography direction,
- leadership names and bios,
- contact information,
- office address,
- imagery direction,
- legal page wording,
- any specific sector visuals or photography,
- final approval on homepage and sector copy.

21. Final Build Instruction

Please build this as a scalable listed-style holding company website inspired by the structural discipline of First Pacific Company Limited. The output should feel premium, restrained, and credible, with a clear parent-company identity and strong sector navigation.

The website must be able to grow over time as new sectors, subsidiaries, countries, and publications are added. It should not be treated as a one-off brochure. It should be built as the long-term digital foundation of a multi-sector group.

22. Quick Implementation Checklist

Area	Must have	Notes
Branding	Corporate, premium, restrained	Not startup or retail
Architecture	Parent company first, sectors underneath	Modelled on listed-style holdco structure
CMS	Easy to edit without breaking layout	Page-level SEO and content modules
Performance	Fast, optimized, minimal bloat	Strong Core Web Vitals
SEO	Metadata, clean URLs, sitemap	Ready for future news / insights growth
Forms	Sector routing and anti-spam	General + sector-specific enquiries
Scalability	Easy addition of sectors and countries	Do not hard-code structure too tightly

Prepared for developer handoff. Baseline strategic model: First Pacific Company Limited.
